PAULING

# Surgery, anywhere humans go.

The 720i. An autonomous operating room for every ship, rig, base and colony. A concept.

Moises Barberá Ramos · 2026 · CC BY 4.0

# Nobody should die of a treatable injury because help was too far away.

A bleed, a burst appendix, a broken femur. On a submarine, an oil rig, a Mars transit. Today the answer is a helicopter, if one can come.

Soon the answer is a pod on board.

WHERE A SURGEON CANNOT REACH

Warships
Oil rigs
Antarctica
Submarines
Forward bases
Mars

Thousands of places on Earth already rely on generalist medics and medevac for those high-risk incidents. Space has no medevac at all.

THE 720I

# An operating room the size of a bed.

THE 720I

# Patient in. Stable patient out. No doctor in the room.

## 01
### Sees
Scans, bloods, vitals

## 02
### Decides
Diagnoses and plans, no link to Earth needed

## 03
### Supports
Airway, sedation, fluids, closed loop

## 04
### Operates
Bleeds, drains, lines, fractures

## 05
### Contains
Sealed, sterile, self-cleaning. Works in zero g

It buys time. It stabilises until a surgeon can take over. A trained crew member can manage it.

PAULING

# I’m building CLARO. This one is for later. Or for you.

Take it. The name, the design, the colours, the deck. Build it, change it, sell it. If any of this lit something in you, say so where people will see it. And if you build it, tell me. I want to be the first one you show it to. Might even be your first check!
